PROFESSIONAL SUMMARY

Solution Architect, Tech Lead and Senior Software Engineer with over 8 years of solid experience in enterprise software architecture design, legacy systems modernisation, and technical leadership of high-performance engineering teams. Strong hands-on background combining robust solutions using Java, Node.js, Cloud Computing (AWS/Azure) and Big Data processing (Databricks). Expert in designing scalable structures based on microservices, Clean Architecture, SOLID principles, mutation testing, and continuous integration (SRE/CI/CD), with a proven track record of guiding multidisciplinary teams towards technical excellence.

PROFESSIONAL EXPERIENCE

Mutant | Remote — São Paulo / Vivo
Solution Architect / Tech Lead

Jul 2024 — Present

- Systems Architecture & Design:** Modelling complex solutions using C4 Model, CQRS, event-driven patterns (Kafka) and resilient APIs (REST/SOAP), reviewing solution designs in continuous collaboration with multiple teams.
- Technical Leadership & Quality:** Conducting agile ceremonies (Scrum), mentoring engineers, and ensuring code quality through Clean Architecture, Clean Code, mutation testing, and strict adherence to SOLID principles.
- Operations & SRE:** Monitoring post-deployment incidents (build-run model) using Kibana and SRE, implementing optimised CI/CD pipelines for high-volume Kubernetes (K8s) clusters.
- HAC-Analytics Project:** Designing and specifying integrated analytical solutions using Databricks and PowerBI for scalable data processing.
- Identify-ip Project:** Technical leadership in replacing a legacy module, focusing on performance optimisation.
- SIP Migration & KYC:** Technical restructuring of APIs for robust, real-time identity validation under high concurrency. Designed optimisations for *KYC - Customer Insights* APIs using advanced caching, reducing average analytical query latency by 40%.

L.J-tech (Consulting) | Remote
Full Stack Developer

Jan 2024 — Jul 2024

- Back-end (Java/Kotlin):** Coding secure microservices for availability control, high-concurrency pricing rules, and transactional reservations.
- Mobile (Android & React Native):** Developing and delivering hybrid and native mobile applications, integrating local device sensors for active stay management.
- Front-end (Vue.js, Advanced JavaScript/TypeScript):** Coding a high-performance corporate web portal focused on fast accessibility, instant rendering, and optimised state management.
- Messaging & Integrations:** Building event-driven workflows with RabbitMQ in Node.js for reliable, near-instant price update propagation to sales channel partners via Swagger APIs.

- **Mobile & Front-end (React Native / ReactJS):** Code review and development of interface enhancements for the official SESC-SP application, stably supporting over 3 million active users.
- **Performance & Security:** Implementing advanced rendering techniques, preventing unnecessary component re-renders, and applying end-to-end encryption in sensitive flows.

- **Share Aero (ReactJS & Tailwind CSS):** End-to-end development of an interactive web portal for sharing aeronautical data, backed by strict unit test coverage using the Jest framework.
- **NexMov (React Native & Node.js):** Developing highly usable mobility solutions with integrated native maps.

- **Descomplica:** Maintaining responsive front-end interfaces using React, NextJS, and Vue.js for educational social networks with high concurrent traffic. Developed robust Backend-for-Frontend (BFF) architectures in Node.js and monitored system health in real-time using Sentry.
- **Rio Card:** Writing integrated microservices within the financial ecosystem using Java and Vue.js, alongside mobile integrations and designing secure electronic transaction flows.

PROJECTS & PORTFOLIO

- **HidroGeo (Open Source):** Rainfall monitoring tool for Rio de Janeiro, engineered with Java 25 and utilising concurrency benefits via Virtual Threads.

■ **Credit Application System:** End-to-end transactional system for credit analysis and request, written in Kotlin following clean architectural guidelines.
- **DDD Project Fullstack:** End-to-end demonstration web application in TypeScript, showcasing the disciplined and structured use of Domain-Driven Design.

■ **Lab Java Quarkus:** High-performance cloud-native microservices implementation focusing on memory efficiency.

EDUCATION

Postgraduate Degree in Software Engineering — PUC Minas	Expected 2027
MBA in Project Management — Universidade Castelo Branco	Concluded
Bachelor's Degree in Marketing — Universidade Estácio de Sá	Concluded
Associate's Degree in Systems Analysis & Development — Universidade Estácio de Sá	Concluded
Associate's Degree in Web & Multimedia Design — Full Sail University	Concluded

TECHNICAL SKILLS

Languages Java (Current Focus), Kotlin, JavaScript, Advanced TypeScript, Python, SQL, HTML5, CSS/Sass	Frameworks & Libraries Spring Boot, Quarkus, Node.js, React, React Native, Vue.js, Material UI, Jest, Express	Cloud & DevOps AWS, Azure (Portal/DevOps), Docker, Kubernetes (K8s), Jenkins, SonarQube, SRE, CI/CD
Tools & Big Data Databricks, PowerBI, Kibana, Sentry, MixPanel, OneSignal, LaunchDarkly, Convisio	Architecture & Design System Design, Clean Architecture, SOLID, Design Patterns, Hexagonal, Onion, CQRS, C4 Model, SOAP	Methodologies & Events Scrum/Agile, Event-Driven Messaging (Kafka, RabbitMQ)
